

WellnomicsWorkPace 3.7.1 Release Notes

▶ Product Release Overview

Product:	Wellnomics WorkPace
Release Version:	3.7.1
Date of Release:	28 th August 2008
Support Information:	For more information or support, please visit our website www.wellnomics.com or email us at support@wellnomics.com .
Document Number:	WP002

▶ Introduction

This document contains the release notes for Wellnomics WorkPace version 3.7.1. The following sections describe the release in detail and provide late-breaking or other information that supplements the main document.

Please note: Upgrading to this release from a previous build of Wellnomics WorkPace 3.0, 3.1, 3.2, 3.3, 3.4, 3.5 or 3.6 is only possible when the existing Wellnomics WorkPace installation is registered with a valid maintenance key that is up to date.

▶ New in Version 3.7.1

The product enhancements in this version streamline the synchronisation of Wellnomics WorkPace with Wellnomics Risk Management, the integrated software solution that manages the health and safety of computer users.

- Daily usage data can now upload to Wellnomics Risk Management at the time of Windows or Wellnomics WorkPace shutdown. Typically this will be when a computer is turned off at the end of the working day. This feature spreads the load on the server when it is being used for synchronisation by large numbers of employees, and also allows greater support for end users that use a “Hot Desk” working environment.
- There is support for reduced data upload to Wellnomics Risk Management. Wellnomics Risk Management can notify Wellnomics WorkPace 3.7.1 that some statistics do not need to be uploaded during synchronisation. Statistics which can be suppressed include individual keys, laptop usage, and statistics for individual applications such as Word and Excel. This feature minimizes the data held by Wellnomics Risk Management in the Wellnomics Risk Management Database and reduces synchronisation time.
- Wellnomics WorkPace 3.7.1 can be used in Monitor Only mode. In this mode, it works in the background, recording computer usage. The user does not see breaks and exercises but their computer usage data can be sent to the Wellnomics Risk Management system. Wellnomics Risk Management then analyses the data and calculates risk levels for users. Users who need to have Wellnomics WorkPace fully implemented can be easily and quickly identified. This mode is aimed at

WorkPace® and Wellnomics® are the Registered Trademarks of Wellnomics Ltd, New Zealand

new users of Wellnomics WorkPace so that their risk levels can be assessed before their breaks and exercises routine is configured.

- At the end of a license period, Wellnomics WorkPace now communicates with the Wellnomics server to find a new license, before it shows an expired warning. This is particularly useful when Wellnomics WorkPace is being rolled out over time in large organisations.
- Enhanced measurement for mouse movement has been incorporated into this release.

► *Fixed Issues*

- WorkPace now uses the UI Language as the initial language instead of the Locale Language.
- Message centering is improved.
- The log scroll bar functionality is fixed.
- A problem with version 3.6 meant that multiple copies of Wellnomics WorkPace could be run by a user at the same time. This has been fixed.

► *Recommendations*

It is our recommendation that you upgrade to this version if you have a valid maintenance key that is up to date, and if:

- This release contains a new feature you would like to use.
- An issue that has affected you has been fixed.
- You have not upgraded in the past 12 months.
- You have been advised to upgrade by Wellnomics Ltd.

► *Installing and Upgrading*

Installation

For a new installation on a stand-alone PC, double-click on the product installer executable (available for download from our website www.workpace.com) to launch to installation application. Further instructions are given during the installation process. Please ensure that you select the 'Local' installation option when prompted.

For a new installation within a corporate networked environment, please see the IT Administrator's Guide for full details (<http://www.workpace.com/doc/IT-Administrators-Guide-A4.pdf>).

Upgrade

Upgrading to this release from a previous build of Wellnomics WorkPace 3.0, 3.1, 3.2, 3.3, 3.4, 3.5, and 3.6 is only possible when the existing Wellnomics WorkPace installation is registered with a valid maintenance key, and that key is up to date.

This version of the product will automatically detect and upgrade your existing stand-alone local installation of Wellnomics WorkPace to the new release.

For upgrading the product within a corporate networked environment, please see the IT Administrator's Guide for full details (<http://www.workpace.com/doc/IT-Administrators-Guide-A4.pdf>).

Manifest

This release consists of the following items:

- Release notes (this file)
- Product installer executable (available from our website www.workpace.com/download).
- Updated IT Administrator Guide (available from <http://www.workpace.com/doc/IT-Administrators-Guide-A4.pdf>).

Minimum System Requirements

System Processor: Pentium 1 GHz
System Memory: 256 MB
Free Disk Space: 30 MB
Operating System: Windows Vista, XP, 2000
